

**“With the Item Import Plugin for the Item Master Lookup, you can import and validate new items direct from an Excel spreadsheet template.”**

Import and validate new item lists into your existing Macola database from an excel spreadsheet template with this plugin. You can now acquire new item catalogs in Excel and easily import them into Exact Macola ES or Progression with confidence, knowing all the data has been validated before the import updates your database. As all fields in both the IMITMIDX and IMINVLOC are validated, this prevents corrupting or misplaced data from becoming part of your database.

- Import Item Location and Item Master records into Macola Progression or ES from an Excel Spreadsheet
- Define default data for items so all fields are populated consistently and properly
- Add thousands of items to your database within minutes rather than hours

### Plugin Features

- Excel Import Template eases creation of input file
- Default fields for repetitive information population
- IMITMIDX and IMINVLOC fields validated
- Peace of mind with item imports

### HyperLynq Family Features

- Low cost rental means you can afford to bring in new product lines at a minimal cost
- Ease of use without specialized database training
- Works with Both Macola ES and Progression

- Fully supported and updated by Lynq
- Tried and tested: we make sure you are getting the right data into the right places in Macola

### Plugin Benefits:

- Peace of mind with data imports
- More accurate data imported into your database
- Eliminates future problems as data is validated before import
- Allows you to update item catalogs quickly and easily
- You do not need DBA skills and training to import data into your SQL database
- Validates fields in tables to make sure all data will process properly throughout the Macola system
